

What it is

Dispatch Messaging allows users to send messages instantly to Raven's screens via the Raven Connected web app.

Dispatch message on Raven's screens.

How it works

Message drivers with important information while limiting distractions with Dispatch messages. Messages with up to 15 characters sent from the Raven Connected web app will appear immediately across Ravens screens for one minute. After one minute the message and time received will appear at the top of Raven screens along with your previously set Raven screens for 15 minutes or until cleared.

If the vehicle is parked when the message is sent it will appear for one minute then 15 minutes when the vehicle is started again.

Sending a message from the Raven Connected dashboard.

How to use it

1. From the web app select a vehicle from the map. A box including the vehicle's information will pop-up.
2. At the bottom of the box where it says 'Message' type out your own message or select a preset or message and hit the paper airplane icon to send.

To cancel the message click the x beside the message in the information box.
