

What it is

Raven Trip Sharing allows you to temporarily share your trip with anyone you want. When the trip ends, so does the sharing.

Trip sharing user view from the web.

How it works

Raven Trip Sharing allows you to send a link to anyone, so they can live-track the vehicle location and see the road ahead using Raven's forward-facing camera.

From either the mobile or web app, use the Share Trip feature to create a link to your trip. Send this link via text, email or through social channels.

The recipient will receive a link, which they can open in any browser. They will see the map of your trip updated in real-time, along with image previews taken from your front-facing camera.

When the trip ends, the link expires and sharing is terminated. The link will no longer work after the trip ends. Raven considers a trip to end one hour after the car is turned off.

If you're already on the road, sharing a trip will send a link to the current trip. If the vehicle is parked, then the next trip will be shared.

How to use it

From the web app

1. From the Details panel, click on the Share Trip button and select how you would like to send the link.

From the mobile app

1. From the dashboard, click on the trip sharing icon. You will be presented with different ways to send the link. Select the way you prefer to send the link.
